                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; mouse; protein kinase; antiarthritic; antisclerotic; osteopathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers.

The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/microtubule affinity-regularing kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzhelmer's disease. The present sequence is a MARK3 associated protein included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AYTDYVATRWYRAPELLVGDTQYGSSVDIWAIGCVFAELLTGQPLWPGKSDVDQLYLIIR 215

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention iseful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), invention and the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MEKYEKLAKTGEGSYGVVFKCRNKTSGQVVAVKKFVESEDDPVVKKIALREIRMLKQLKH

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, osteopathic, cytostatic, anti-HTV, haemostatic, nephrotropic. Costeopathic, cytostatic, and hepatotropic activity. The polynucleotides and the polypeptides of the invention can be used for gene therapy, compared in replacement therapy and are useful for treating a variety of protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynucleotides are particularly useful for diagnosing, treating or preventing cell particularly useful for diagnosing, treating or preventing cell compared in melanoma, myeloma or sarcoma), anaemia, (copin's disease, acquired immunodeficiency syndrome (AIDS), Goodpasture's cyndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or copy ABUIL450-ABUIL450-ABUIL485 represent the MDDT polynucleotides encoded by ABUIL450-ABUIL450-ABUIL450-ABUIL461 in the disclosure of the invention. NOTE: The sequence data for this patent did not form part of the printed copy such particulation, but was obtained in electronic format from WIPO at the invention control compared to the printed copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy and copy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PNLVNLIEVFRKRRRWHLVFEYCDHTLLNGLERNPNGVADGVIKSVLWQTLQALNFCHIH 125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               65

Sequence 10, Application US/09671050

Patent No. 6716616

GENERAL INFORMATION:

APPLICANT: Donoho, Gregory

APPLICANT: Nehls, Michael

APPLICANT: Sands, Arthur T.

TITLE OF INVENTION: Polynucleotides Encoding the Same

FILE REFERENCE: LEX-0046-USA

CURRENT FILING DATE: 2001-06-11

PRIOR PAPLICATION NUMBER: US/09/671,050

CURRENT FILING DATE: 2001-06-11

PRIOR PAPLICATION NUMBER: US 60/156,511

PRIOR FILING DATE: 1999-09-28

NUMBER OF SEQ ID NOS: 13

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 347
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

"A family of human cdc2-related protein kinases.";
EMBO J. 11.2909-2917(1992)
-I. CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-I. SIMILARITY: Belongs to the Ser/Thr protein kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MIM; 603441; --
